	/Timothy M. Speer/ Primary Examiner, Art U	Init 1794	

Continuation of 11. does NOT place the application in condition for allowance because: The applicant's arguments in regard to the cobalt content and the proposed deficiency in Dardi and Strangman are not persuasive enough to traverse the teaching of these two references. As stated in the last office action, the teaching of cobalt in Strangman, while several of the examples do teach that only a trace amount of cobalt is used, in the abstract as well as in the summary of the invention, the coating for a superalloy turbine component can contain a cobalt ingredient in the range of 0-10%. By this teaching, the range of cobalt claimed by the applicant is considered to be met by the teaching of Strangman. If Strangman is given it broadest possible interpretation, it's considered overlap the ranges taught by the applicant.

The applicant's secondary argument concerning the strengthening of the coating by the addition of tantalum and its claimed deleterious effects is not considered to be persuasive, even in light of the affidavit supplied by the applicant. First, if the Strangman reference is looked at in its broadest interpretation, then it teaches that tantalum can be in a range of 0-10%, thereby meaning that no tantalum can be present in the invention. While an example in Strangman may contain 7% tantalum, several other parts of Strangman disclose that 0% tantalum may be used.
